Direct Hay Weighted Average Report for week ending 12/24/2021

Volume		
This Week	Last Reported ( )	Last Year

Please Note: The above volumes (tonnage, acres, and bales) listed on this USDA LPGMN report are for confirmed trades only, it does not include estimated volume (tonnage) for bids or offers to the trade.

Compared to the last report: Hay prices are steady in all regions. Trading activity and demand were moderate. Pastures across the state are diminishing due to abnormally warm temperatures and limited moisture. As a result, winter feeding is in full swing in all regions. According to the US Drought Monitor, measurable precipitation has been recorded at Amarillo, Texas for 70 consecutive days which is the 4th longest streak on record. Additionally, abnormal dryness (D0) and D1 to D2 drought continue to expand across west-central Texas. Month-to-date temperatures (Dec 1-20) have averaged 6 to 10 degrees F above normal throughout Texas. Impacts, related to the expanding and worsening drought conditions across the southern Great Plains, include poor grazing for livestock. A 1 category improvement occurred in East Texas as the received 1-3 inches of rain over the past week.

\*\*\*Due to limited sales and price changes this report will be released bi-weekly until more volumes of hay is moving.\*\*\*

\*\*\* The next report release will be January 7th\*\*\*
